

Clinical Evaluation - Application

This application serves three purposes: 1) Provides an efficient workflow-like process for the submission, review, and approval of student clerkship evaluations, 2) Enables students with an easy to use interface to evaluate their experience at a Hospital for a given Clerkship, 3) Offers students with online access to Faculty feedback on their performance during a clerkship.

1. The information collected by this application enables SGU to evaluate the level of education provided at each of their affiliated Hospitals with the expectation of ensuring that all students receive the same level of education, regardless of where they take their Clerkships.
2. The application also manages the individuals that fulfill the roles of DME, CD, and MEC for our affiliated Hospitals. This plays a major role in the evaluation assignment and tracking process.
3. The grades of approved evaluations are automatically written to the ERP. There is no longer a need for manual entering of grades for Core Clerkships.
4. The application is built with a robust set of reports that allow for consistent oversight of the entire process.
